

MANAGED BACKUP

Protect

Recover

Replicate

Resume

A fully flexible and managed service. Designed to protect ALL your data, wherever it is stored – physical, virtual, cloud or Software As a Service (SAAS) environment.

Now more than ever, as data footprints have grown exponentially, businesses need to take action to back up their data.

Critical data now moves across an increasingly complex system of networked environments and is stored in a multitude of ways on very different platforms, so you may have out grown your traditional backup solution!

What happens should you experience the following?

Theft - you need your data available again quickly, should equipment get lost or stolen

Cyber Attack - recover data from ransomware attacks, system sabotage etc

Hardware Failure - should your business experience a system failure, ensure there is little actual business downtime

Physical Disaster - you insure your business premises, but your unique IT environment also needs protecting.

Key Benefits

Blue Logic uses trusted back up technology to build a tailored solution that fits your particular business model.

Automated and Fully Managed – Blue Logic support and manage your whole backup service – no hard drives to lock up/ take home.

Disaster Recovery – avoid the risk of catastrophic data loss and link to your specific business RPO (recovery point objective) whether this be once a day or once an hour

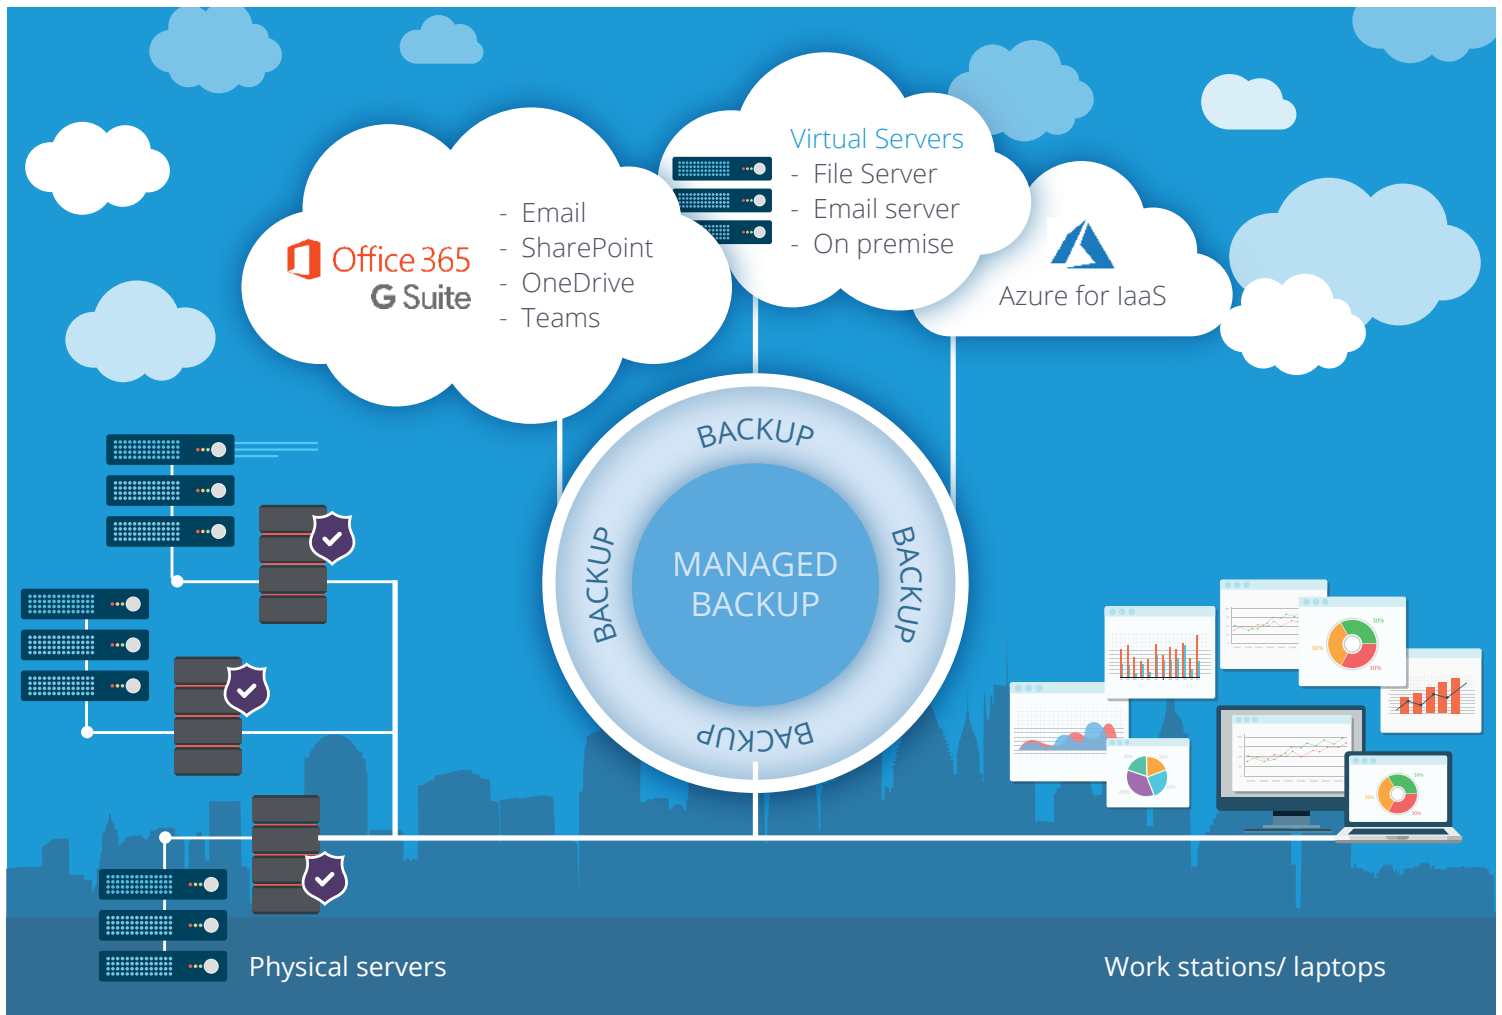

Testing – Blue Logic Managed Backup has the ability to perform Disaster Recovery (DR) testing as required to ensure business recoverability

Business Continuity – restore normal business operations quickly and securely ensuring your business RTO (recovery time objective) is adhered to

Flexible and Scalable – additional data sources can be added or taken away as and when you need them, easily and securely. Your backed-up data is stored in enterprise level secure datacentres so it's flexibly and efficiently protected, wherever it resides within your business and however fast it grows!

Unlimited storage – offsite backup allows full replication of all data sources

Compliant – Blue Logic Managed Backup can be configured and managed to meet your specific GDPR compliance requirements.

- Workstation/Laptop – backup all files and data from your devices no matter where you are – home or away
- Physical servers – ANY server that hosts your data
- Multi-tiered virtual servers – HyperV/VMware private cloud
- SaaS – all data from **Microsoft Office 365** and GSuite
- Cloud – all IaaS (Infrastructure as a Service) data stored in your Azure platform.

Managing data across multiple environments may be complex, but the recovery and replication of that data should disaster strike, doesn't have to be. Blue Logic Managed Backup offers a fully managed service that will recover data from stolen devices, cyberattacks, hardware failures or physical disasters.

Blue Logic – who we are

Blue Logic is a leading Managed IT Service and Accounting Solutions provider in the UK, helping businesses become more successful by offering and implementing tailored IT business services.
